Sage MAS 90 and Sage MAS 200 ERP business management software offers a broad range of modules designed to meet the many needs of virtually any business. Choose to integrate as many modules as are beneficial to your business, and the resulting system can be truly more powerful than the individual components. Additionally, as your business continues to grow, you can have the confidence of knowing there are additional Sage MAS 90 and 200 modules that can provide you with the best solution to all of your business needs.

Regardless of the platform you choose, there is a Sage MAS 90 or 200 system that can meet your requirements. Windows 2000, XP, and SQL versions are available. Functional on both the traditional local area network (LAN) and single-user environments, as well as wide area network (WAN) environments. The product line allows the flexibility to expand your system to accommodate greater numbers of users as your company grows, and provides more rapid transaction processing.

Sage MAS 200 is ideal for multi-site businesses and requires no additional remote access software. Designed to deliver industry-leading "benchmarked" performance for fast, reliable data throughput. Optimized for TCP/IP, this dynamic solution is Internet and intranet compatible and the thin-client architecture provides fast, reliable network connections.

Sage MAS 90 and Sage MAS 200

Available Modules

"With Sage MAS 90 and its diverse suite of modules, we can provide the best quality service to our customers."

Mary Halvorson, Operations Director
Orpheus Music, Inc.

FEATURES

Financials

At the heart of every Sage MAS 90 and 200 system are five financial modules: General Ledger, Accounts Receivable, Accounts Payable, Bank Reconciliation, and FAS Asset Accounting. No other business management software combines the depth, functionality, and ease of use to the degree of the Sage MAS 90 and 200 family of products. Used by themselves, these five financial modules provide an accounting foundation for your business that will maximize your productivity. When seamlessly integrated with any of the solutions below, Sage MAS 90 and 200 become even more powerful—providing solutions for nearly any business management need.

Distribution

The Sage MAS 90 and 200 distribution solution gives you the power to cut costs, build profits, and improve customer service and loyalty. The distribution modules include: Inventory Management, Sales Order, Purchase Order, Return Merchandise Authorization, Bar Code, Credit Card Processing, and StarShip. Among the long list of functions you can perform with the distribution solution is the ability to track inventory at multiple locations and maintain detailed sales history for each customer, product, and product line. StarShip automates the shipping process by providing links to major shipping carriers.

Global e-Commerce

Sage Software is committed to providing you with ongoing software improvements as technology and business requirements evolve. That's why it comes as no great surprise that we're at the forefront of the rapidly expanding world of e-commerce. The e-Business Manager module for Sage MAS 90 and 200 provides an affordable, out-of-the-box solution that can quickly and effectively bring your company into the online arena. The unique structure of this module allows additional functionality to be integrated by plugging in applets. The .order applet allows customers to securely order online. The .inquiry applet gives your customers instant access to their account status online. And the .store applet allows anonymous new customers to browse products and securely place orders online.

Time and Project Management

Sage MAS 90 and 200 link and integrate with a series of modules that can lead your company to increased efficiency and profitability. More than an automated time card system, the Sage MAS 90 and 200 TimeCard module is a powerful and flexible addition to the Payroll and Job Cost modules. By adding Abra HR and Payroll to the financial modules, you'll have a complete solution for tracking your most vital asset: your employees. No matter which time and project management module you choose, you can rest assured that it will help improve your company's productivity and profitability.

Manufacturing

The Sage MAS 90 and 200 manufacturing modules provide detailed and accurate tracking and reporting throughout the entire manufacturing process—from the vendor's site to the shop floor and on to completion. The manufacturing solution offers a series of features that will help maximize efficiency throughout all stages. This includes the ability to create multi-level bills and produce accurate informative reports detailing bill structures. And, when goods are finished, they are instantly posted to Inventory Management or Sales Order for seamless integration.

Business Intelligence/ Integration Tools

Designed to increase productivity and enhance functionality, these customizable report writers and integration tools work seamlessly with Sage MAS 90 and 200 to create an all-encompassing information management system for your business. Our customers rave about the additional functionality they get by using Business Insights and Business Alerts. Business Insights, designed specifically for high-level managers such as CEOs, CFOs, and sales directors, enables you to view financial information in an attractive graphical format from your own customized homepage. It's a timesaving and effective way to review and analyze your vital company information. Business Alerts is another way to keep your company, customers, and vendors "in the know." This tool can be set to send you e-mail when a predefined condition is met. For instance, if inventory drops below a certain point, you'll be notified with an instant message. These business tools are just one of the reasons why Sage MAS 90 and 200 are recommended by more CPAs than any other midrange accounting solution.

Front Office Solutions

By linking Sage MAS 90 or 200 to a customer relationship management (CRM) solution, your company can make significant strides in sales performance and customer service. Working independently, CRM applications (such as Sage CRM SalesLogix and ACT!) increase efficiency in customer-centric processes, including tracking and communicating with customers and prospective customers. Linking and synchronizing a CRM solution to your Sage Software system allows you to provide superior customer service because all the necessary information relevant to a customer can be readily accessed by your sales force.
